

Home Made Pickles - Project Documentation

Project Overview:

A Flask-based web application for browsing and ordering home-made pickles and snacks. The app includes user signup/login, a catalog, cart management, and order placement.

Technology Stack:

- Python
- Flask
- Jinja2 templates
- HTML/CSS
- AWS DynamoDB Local (via boto3)

Dependencies:

- Flask==3.1.1
- boto3 (installed in project environment if needed)
- werkzeug, Jinja2, itsdangerous, markupsafe

Setup Instructions:

1. Activate the virtual environment.
2. Install dependencies from requirements.txt.
3. Start DynamoDB Local on <http://localhost:8000>.
4. Run app.py with Python.
5. Open the browser at <http://127.0.0.1:5000>.

Key Routes and Pages:

- / or /home : Home page
- /signup : User signup
- /login : User login
- /products : Product listing and filtering
- /cart : View cart
- /checkout : Complete purchase flow
- /place_order : Submit order to DynamoDB
- /admin : Admin dashboard for admin@pickles.com

Application Details:

- Uses Flask sessions to store user login state and cart data.
- Uses DynamoDB Local for Users and Orders tables.
- Provides product filtering by veg, non-veg, and snacks.
- Includes order history saved to DynamoDB and success confirmation.

Project Structure Highlights:

- app.py : Main Flask application and route handlers.
- templates/ : HTML page templates.
- static/ : CSS and image assets.
- requirements.txt : Python dependency list.

- logs/ : Application log output.

Notes:

- The app uses dummy AWS credentials for DynamoDB Local.
- Admin access is restricted to admin@pickles.com.
- Cart data is stored in Flask session per user.
